

To whom it may concern,

I'm writing to recommend Sherif Hoti, who worked as a Software Engineer on my team at Aios from February 2026 to September 2026.

Aios is a YC-backed healthcare technology company operating in the UK and US, building the infrastructure behind consumer healthcare brands including Fella Health and Bolt Pharmacy. During Sherif's time with us, the company grew to over 200,000 patients and more than \$400M in annual revenue, while remaining cashflow positive. Engineering owned the platform, clinical tooling, and patient-facing systems behind that growth, and Sherif was part of the team that delivered it.

Sherif worked directly with me on Jesse, our custom agentic system for growth and customer support. Jesse handles more than 10,000 customer interactions per day autonomously and is currently responsible for over \$100,000 in daily revenue. It goes well beyond generating replies: it takes actions on the platform, resolving billing and order issues, guiding patients through enrollment, and more. Sherif contributed to the harness itself, which is TypeScript-based, lives in our monorepo, and uses current techniques including RAG, HyDE for retrieval, dynamic LLM routing, and custom caching strategies.

Sherif operated in an environment with high expectations around ownership, delivery speed, and code quality, and consistently met them. He was reliable, easy to work with, and took feedback well, which in a fast-growing company matters as much as raw technical ability.

In September 2026, Aios restructured its engineering organisation and reduced the team by roughly half as part of a broader change in how the company is set up. Sherif's departure was a result of that reorganisation, not of his performance. I would hire him again without hesitation, and I'd recommend him to any engineering leader looking for someone who takes ownership and delivers.

I'm happy to speak further by email or phone.

Gzim Helshani
VP of Engineering, Aios
